

PROCESS CELL

DEEP REACH DEBURR

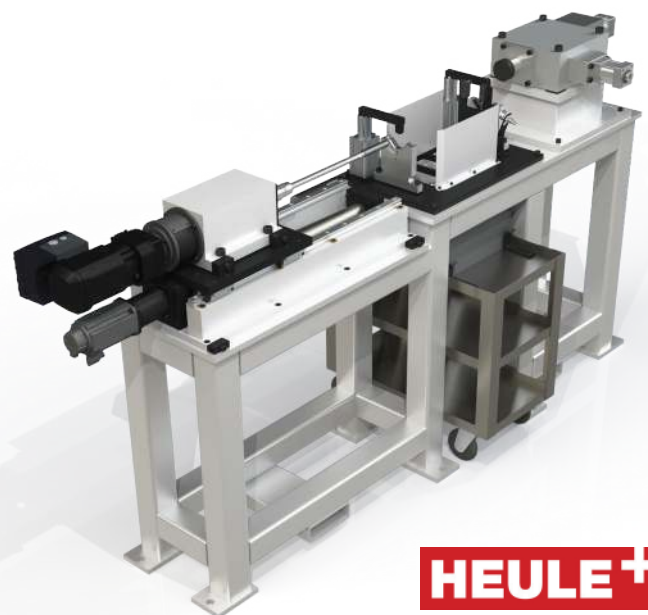

FLT'S DEEP REACH DEBURR SOLUTION IS BUILT TO HANDLE A WIDE RANGE of automated deburr tasks, including uneven and multifaceted surfaces. Irregular edges are cleaned and smoothed while advancing and retracting, reducing cycle time.

Operations stay clean with the simple and reliable chip collection system. Automated swivel clamps provide accurate part placement, ensuring precision and consistency through each cycle. Included is a teach pendant allowing quick and precise setup, and ease of maintenance.

TECHNICAL DETAILS

- **Automated Deburring Solutions** – The cutting tool deburrs while both advancing and retracting.
- **Multi-edge Deburr Capability** – System adapts to any deburring situation including uneven and multifaceted surfaces.
- **Swivel Clamps** – Accurately positions the part to ensure a consistent and reliable process.
- **Precision Backup System** – Robust wedge lock design exacts consistent part fixturing regardless of load variation.
- **Teach Pendant Accessibility** – Using modern teach pendant technology, safely entering the cell has never been easier, allowing for precision setup and simple maintenance.
- **Chip Collection System** – Keeping the operation clean, the simple and effective chip collection system keeps the machine tidy.
- **Utilizes Heule precision cutting tool**

**HEULE+**
